

Session 1: What is Programming?Topics:Define “program” and “programming language.”Explain compilers and interpreters.Discuss importance of algorithms and flowcharts.Trainer Activity: Draw a flowchart for “Ordering food online.”

- 1) Write a short paragraph in your own words defining what a 'program' is and give one real-life example from any app you use daily (like Instagram, Zomato, or Paytm).

A program is a set of instructions written in a programming language that tells a computer how to perform a specific task. Programs help computers solve problems, process data, and automate activities. For example, when I use Zomato to order food, a program helps display restaurants, show menus, process payments, and track the delivery of my order.

- 2) List three popular programming languages you have heard of, and for each, mention whether it is usually compiled, interpreted, or can be both.

Hint: Think of languages like Java, Python, and JavaScript.

Programming
Language

Compiled / Interpreted

Java

Both (compiled into bytecode and then interpreted/JIT-compiled by the JVM)

Python

Interpreted

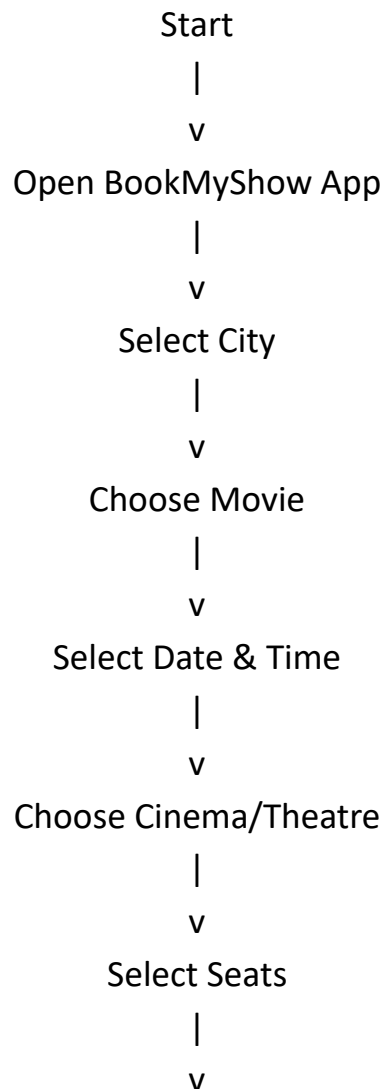

Programming
Language

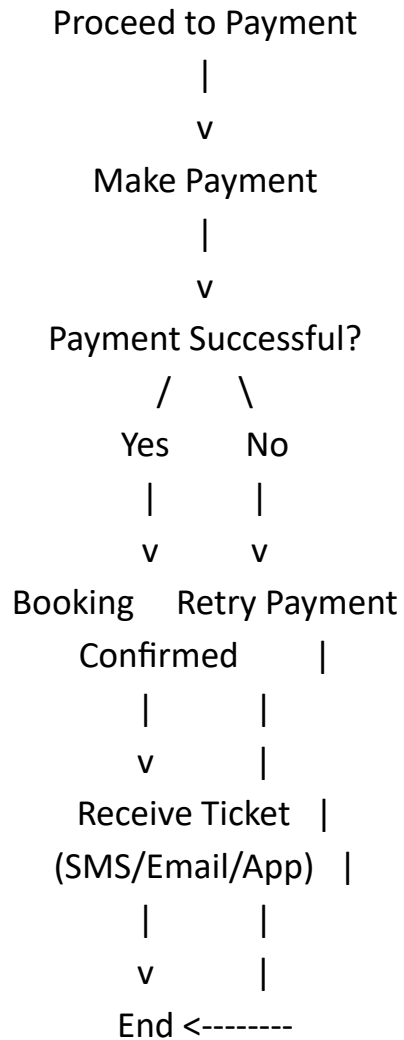

Compiled / Interpreted

JavaScript

Interpreted (modern engines also use JIT
compilation)

3) Draw a flowchart (on paper or using any online tool) for the process of booking a movie ticket on BookMyShow, starting from opening the app to receiving the booking confirmation.

Algorithm for Booking a Movie Ticket:

1. Open the BookMyShow app.
2. Select your city.
3. Choose the movie you want to watch.
4. Select the date and show time.
5. Choose the cinema/theatre.
6. Select your preferred seats.
7. Proceed to payment.
8. Complete the payment.
9. If payment is successful, receive the booking confirmation and e-ticket.
10. End.

4) Write down the steps (as an algorithm, using simple numbered instructions) for ordering food on Swiggy — from opening the app to completing payment.

Algorithm for Ordering Food on Swiggy

1. Open the Swiggy app on your mobile phone.
2. Log in to your account if required.
3. Enter or confirm your delivery location.
4. Search for a restaurant or browse available restaurants.
5. Select the restaurant of your choice.
6. View the menu and choose the food items you want to order.
7. Add the selected items to your cart.
8. Review your cart and make any necessary changes.
9. Click on **Proceed to Checkout**.
10. Confirm the delivery address.
11. Apply any coupons or discount offers (if available).
12. Select a payment method (UPI, card, wallet, or cash on delivery).
13. Complete the payment process.
14. Receive the order confirmation message.
15. End.

Output: Food order is successfully placed and payment is completed.
